German-hater Jeremy Jones fails to ambush and defame Fredrick Töben on Adelaide's ABC Radio 5AN, 30 March 1998

When Radio 5AN's morning presenter, Richard Margetson announced to his listeners that Jeremy Jones would appear on his program to talk about an Adelaide-based hate Internet website it was a call from an interstate supporter that alerted Töben to this happening. Töben's first call to the station at 8.20 am was fruitless, then his second call at 8.30 am had the producer of the program place Töben on hold ready to participate in the live discussion.

Although Margetson claims to have researched the topic, he failed to contact Töben for the program thereby offending against the principle of natural justice. Had it not been for the interstate supporter's call, then Jeremy Jones would have been free to do what he loves best: persecuting Töben and the Adelaide Institute by talking about their work without giving them a right of reply.

No wonder Jones never wanted a conciliation conference during the HREOC proceedings. He must know that any of his arguments about the gassing story can swiftly be demolished. Adelaide Institute's mind-liberating work continues to stand proud because it does not rest on a foundation of inaccuracies, exaggerations, deception and lies. As 'foreign minister' of Australia's Jewish community, Jones is well-connected to Israel's secret service, Mossad. Perhaps we can win them over to organise a public debate between Jones and Töben.

Richard Margetson: Adelaide has a new marketing authority which is promoting art and culture and heritage, life-style, wine, food - all those positive things that we know happen in Adelaide.

But Adelaide has other people unofficially promoting the city in a very different way. It may surprise you to learn that in some cities Adelaide has a well established reputation as the home of racial bigotry, extremism, neo-Nazism and anti-Semitism. Joining me now is a former Adelaide resident now a Sydneysider, Jeremy Jones. Jeremy is the director of Community Affairs for the Australia, Israel and Jewish Affairs Council, and Jeremy a very good morning to you.

Jeremy Jones: Good morning Richard.

RM: Jeremy, am I exaggerating a little bit much when I say Adelaide does have a really strong reputation as the home of racial bigotry, neo-Nazism and that sort of thing?

JJ: It's an exaggeration in one and it's not in another. It's just we have to remember that when we think of foreign places we may think of only one little aspect and that's the one we're most recently heard, one that sticks in our memory. So, for instance, we may think of Oklahoma as the site of a terrorist bombing while of course Oklahoma city is a lot broader than that. You may think of India as a scene of a cricket test when obviously the culture is much more diverse. And the thing with Adelaide is over the years - first there were the trials of Nazi war criminals or alleged Nazi war criminals taking place in Adelaide. Then there was the situation of National Action's very public activities based in Adelaide. But much more recently in the international, the global scene of the Internet one name which constantly comes up on sites of people who are looking at the most offensive material aimed at Jewish people in particular around the world to a site which has

Adelaide in its title, and for that reason people who haven't heard much of Adelaide who wouldn't know what a pleasant place it is and live in or visit only, have the image of a place which is the base of someone who would spread what they argue is hate propaganda.

RM: In researching the story we've come across this world web site that we're talking about. It's called the Adelaide Institute. What do you know of that organisation?

JJ: Well, I have to be careful in the sense in what I say in that the Adelaide Institute is an Internet site maintained by an Adelaide resident with the assistance, I would guess, of a few people in Adelaide, his friends or colleagues, and that site in May 1996 - an advertisement appeared in *The Australian* newspaper inviting people to come and visit the site which was promising them new insights into world history, I guess would be a reasonable summary, and within three or four weeks the various Jewish bodies around Australia were receiving quite a number of phone calls and electronic mail communication from people who'd gone to that site and were deeply offended and insulted because what they had found on that site wasn't anything that could be regarded of legitimate research. It was nothing which was academic, nothing which was scientific but a great amount of what you could regard as very strong slurs against people who were Jewish and particularly against people who either suffered through the Nazi Holocaust or descended from people who suffered through it or died during the Nazi Holocaust.

RM: Seven-and-a half minutes to nine. 891, Adelaide's 5AN. We're speaking with Jeremy Jones, the director of the Community Affairs for the Australian, Israel and Jewish Affairs Council about a site called the Adelaide Institute and as such a surprise to us as to Jeremy no doubt is that Dr Fredrick Toben, who is the director of that institute, has just called in and we join him on the line this morning. Dr Toben, good morning to you.

Fredrick Toben: Good morning.

RM: Just first of all, I guess, we've just been hearing from Jeremy there about referring to your site as anti-Semitism, I guess in lots of ways, not legitimate, not academic, not scientific. What's your initial response to those types of claims?

FT: Well, Jeremy does nothing better than merely talk about me. He talks about me but he doesn't talk about the content I'm talking about and my challenge to him is, and I did this at the Writers' Week, I offered Norman Davies a thousand dollars to show me or draw me a homicidal gas chamber. Now this can't be done and instead he labels, libels me and says that I'm a Nazi or neo-Nazi or a racist or a hater and that is not good enough for me. This is defamatory because he will not come to grips with my challenge.

RM: Well, is the challenge such that you are denying the fact that a holocaust took place?

FT: Nobody denies the fact that millions of people died in terrible circumstances - Jews and Gentiles. What is being denied, not really denied, what I'm saying is - see, the problem goes back to this one little simple idea: the people

who say that the Germans gassed millions of people in homicidal gas chambers, they're making an allegation against the Germans. They say that the Germans planned, constructed and used gas ...

RM: And they would have to be said that there was a fair degree of historical evidence to show those things.

FT: Well, this is the problem. I came back from Auschwitz last year and I had a look at the alleged gas chamber and now it's been decommissioned. They say it was made to look like a gas chamber. This is in Krema I if anyone knows about this. Auschwitz is a complex of a number of different camps and ...

RM: But we're talking about issues that without much, I mean, obviously where people can be mislead, but it's very hard to be mislead on the level that the world has been mislead on an issue of the Jewish Holocaust, surely?

FT: Nobody - you see when we use the word Holocaust we must define the term because nowadays anyone who suffered under the Nazis during the second world war can claim to be a Holocaust survivor if he's Jewish. Now that to me is using the concept Holocaust in the wrong way because ...

RM: We'll just turn back to Jeremy Jones for the moment. Jeremy Jones, the director of the Community Affairs for Australian, Israel and Jewish Affairs Council. Jeremy, immediately you have to respond to those types of issues that the challenge has been thrown to you.

JJ: But this is hardly the forum for anybody to come to grips with some of the issues that have been raised.

RM: I guess so.

JJ: And what I want to say is that as I was saying before the telephone call was received, that in late 1995 the Australian federal government passed legislation called 'The Racial Hatred Act' and under that act any Australian has the opportunity to lodge a complaint against something which is a public act, reasonably likely in all the circumstances to offend, insult and humiliate or intimidate another person or a group of people, and is done because of the race, colour or national or ethnic origin of the person or of some or all of the people in the group. The point is that after that site was publicised, I

have no idea how long it was in existence before it was publicised, the peak body of the Australian Jewish Community in discussion with all its constituents and affiliates decided to take the action of lodging the complaint with the Human Rights and Equal Opportunity Commission concerning the contents of that site. Now obviously this is a matter which has not yet come before public hearing. It has been a very lengthy process so far and there's been a great deal of correspondence exchanged. But the simple matter is the Jewish community representative organisations believe that this site falls into that category and that's why we have lodged a complaint. Now to talk about the particular issues or to try and have the sort of debates or discussions that Fredrick Töben's having at this point doesn't serve the purpose of understanding what the law is or what the complaint is at all.

RM: So a site such as the Adelaide Institute site, what is your response to it if it is classified, as you say, racial vilification, then should it be still in existence? This is where we get into the difficulty, I guess, of censorship of what's actually available to be read or seen.

JJ: Yea, it is a complex area and it's certainly not a black and white area and that's why in the Jewish community we don't go in very simply without giving it a great deal of thought before we would lodge a complaint under this particular act. But the simple matter is that if you have a right to free speech you also have a responsibility not to use that free speech in a way that it impinges on somebody else's rights to live their life free of vilification and intimidation. The part of the logic of having defamation law, having libel law, having laws about public comments which might endanger public safety is to say that free speech is a very important freedom but it's one of many and it's important that a society like ours works out the appropriate balance between those freedoms.

RM: OK, Jeremy Jones, we have to leave it there. Thank you very much for your time this morning and Dr Fredrick Töben we thank you also for your call this morning as well.
891 Adelaide's 5AN.

Pyne objects to PM's 'holocaust allusion'

By Jeremy Thompson, 22 March 2011

The spectre of the holocaust was raised in a spiteful Question Time in Federal Parliament, with the Opposition likening the phrase "climate change denier" to the Nazi genocide of Jews. Prime Minister Julia Gillard described Tony Abbott as a climate change denier - a frequent political barb used against the Opposition Leader.

But the Manager of Opposition Business, Christopher Pyne, took a point of order. "I think the words being used by the Prime Minister would be regarded as offensive words," he said amid rowdy scenes. "We all know the connotation the Prime Minister is trying to bring about by using the word 'denier'. "We know she's trying to allude to the holocaust. It is offensive and it must stop."

Speaker Harry Jenkins said he had to use "all the sensitivity" he could muster to hush the House.

"I think that the construction the Manager of Opposition Business has placed at this point in time is stretching it," he said. But Mr Pyne was not prepared to leave it there. "Mr Speaker, with 18 years in this place I don't think anybody would accuse me of making light of the holocaust or any issue to do with the state of Israel," he said. "I was 11 years as chairman of the parliamentary friendship group on Israel. I make the connection between climate change denier and holocaust denier. "I find it offensive and I'm sure the Leader of

the Opposition finds it offensive. In that spirit I would ask you to ask [Ms Gillard] to withdraw it."

But the Speaker would not be moved - and delivered a reprimand to both sides. "I simply say to the House that actually having come to this flashpoint I would hope that members take a deep breath and behave in a manner that those that observe us from outside would expect," Mr Jenkins said. "That would apply to both sides actually turning down the heat, turning to the basics of what we are here for. "That is to debate the issues and not get into the personality clashes that we are seeing over many question times. "Regrettably, we are judged by this hour-and-a-half of our proceedings."

But neither would Mr Abbott leave it alone. "I find the Prime Minister's statement both untruthful and offensive. If you don't wish to ask her to withdraw Mr Speaker, I just want to place on record it is both untruthful and offensive," he said.

Mr Jenkins wanted no more of the issue. "I hope that the whole membership of the House would see this as a full stop," he said.

From: Dagmar Brenne danaemet1@bigpond.com

Well, yes, the "Holocaust" related word coinage is now in full swing. "Climate Denier", "climate Gestapo", "climate Auschwitz

camps", "Climate Nazi", "anti climatist" for whom a jail sentence waits. Shakespeare would be proud of these newly invented words. Language is ever evolving!

Hamas protests UN plans to teach Holocaust in Gaza **IBRAHIM BARZAK**

GAZA CITY, Gaza Strip (AP) — The United Nations has launched a new plan to teach the Holocaust in Gaza schools, drawing fierce condemnation from Gaza's militant Hamas rulers, school teachers — and even the body tasked with peace negotiations with Israel.

If implemented, it would be the first time most Palestinian children learn about Jewish suffering. But the outcry underscores how sensitive the issue is to Palestinians.

"Playing with the education of our children in the Gaza Strip is a red line," Hamas Education Minister, Mohammed Asqoul told a website of the group. He said Hamas will block attempts to teach the Holocaust "regardless of the price."

The uproar erupted after a U.N. official told a Jordanian daily in February that UNRWA, the main U.N. agency serving Palestinian refugees, would introduce a short case study about the Holocaust to Gaza students as part of its human rights curriculum.

"Instead of pre-emptive accusations, it is important for Palestinians ... to fully understand the tragedies and suffering that happened to all people through generations, without divvying up facts and taking things out of context," the official, Sami Mushasha, was quoted as saying.

UNRWA representatives refused to comment on the record, but one official said the agency was committed to introducing the curriculum for the next school year, beginning in September.

He added that officials were hesitating because they feared Hamas would incite loyalists to damage U.N. schools or harm their teachers if they introduce the materials. He requested anonymity because he was barred from discussing the matter with the media.

Hamas frequently accuses the U.N. of spreading immorality, and unknown assailants have attacked the agency's property in the past, including the torching of summer camps last year. Since Hamas seized power of Gaza in 2007, it has viewed the U.N. as the main challenger to their influence in the coastal territory. Officials have tried to limit the international group's vast influence in Gaza, where it operates schools for some 200,000 children.

But the controversy over teaching the Holocaust in Gaza is more than a power struggle between the U.N. and Hamas, whose militant officials frequently deny the Nazi genocide of European Jewry ever occurred.

Many Palestinians are reluctant to acknowledge Jewish suffering, fearing it would diminish recognition of their own claims. Views range from outright denial to challenging the scope of the Holocaust.

Even Hamas' bitter enemy, the Western-backed Palestinian Authority, which rules the West Bank, reacted angrily to the U.N. plan. And the Palestinian Liberation Organization, the chief body tasked with negotiating peace with Israel, rejected the idea.

"Teaching the Holocaust to Palestinian students in U.N. schools is unacceptable," said Zakaria al-Agha, a member of the PLO's executive committee.

Israeli government spokesman Mark Regev called the Palestinian responses "obscene." Israelis consider the Holocaust a central event in modern Jewish history.

Some 6 million Jews were killed by the Nazis during World War II, and the need to find a sanctuary for hundreds of thousands of Holocaust survivors contributed to Israel's creation after World War II.

In a war that followed Israel's declaration of independence, more than 700,000 Palestinians fled or were expelled from their homes.

The Palestinians call this dispersal their "Nakba," or catastrophe, and many see the events linked. As such, recognizing the Holocaust is often seen as tantamount to acknowledging Jewish claims to the land.

Israeli officials have long said that Palestinian recognition of Jewish suffering is a necessary step toward peace. But for Gaza residents, empathy is particularly difficult: Most of the territory's 1.5 million residents live in poverty, facing Israeli restrictions in commerce and travel, and hundreds of civilians were killed in an Israeli military offensive against Hamas two years ago, aimed at stopping daily rocket attacks at Israel by Gaza militants.

Yet even if the U.N. moves ahead with the plan this year, it could face another obstacle: its own schoolteachers.

In about a dozen interviews, they said they did not want to teach the materials and warned of rebellion.

"The agency will open the gates of hell with this step," said one schoolteacher, Sami. "This will not work."

Hadid reported from Jerusalem.

Farrakhan: Mideast-Like Revolution Headed for US

By Mike Tighe, Monday, 28 Feb 2011 01:55 PM

Louis Farrakhan, leader of the Chicago-based Nation of Islam and self-avowed pal of Libyan dictator Moammar Gadhafi, contends that the revolutionary onslaught enveloping the Mideast will be coming soon to the United States. If Gadhafi were persecuted for crimes against humanity, then President George W. Bush should be, too, Farrakhan told followers Sunday in Rosemont, Ill., according to [theChicago Sun-Times](#). Gadhafi has ordered supporters to kill protesters as Libya has imploded with escalating demonstrations against his regime. The 77-year-old Farrakhan, who addressed nearly 18,000 followers during a four-hour talk at the annual Saviours' Day convention, said he still counts Gadhafi among his friends, the Sun-Times reported.

The Hon Louis Farrakhan

After all, Farrakhan said, no leader ever gains the allegiance of 100 percent of the people. And, Gadhafi were prosecuted for

crimes against humanity, so should Bush for the wars in Iraq and Afghanistan, he alleged.

Farrakhan, who visited Gadhafi in the 1980s and even accepted a humanitarian award from him in 1996, warned Sunday that the Mideast revolution will land in the United States sooner rather than later, the Sun-Times reported. "What you see happening there, you'd better prepare because it will be coming to your door, America."

Farrakhan added, "I hope that President Obama will remember his instructions to all nations — be careful how you attack and kill innocent people who are protesting. Take your own words into your bosom and be reminded when it comes to your home."

Louis Farrakhan says Moammar Gadhafi has always been a friend

By KiM JANSSEN Staff [Reporter/kjanssen@suntimes.com](mailto:kjanssen@suntimes.com) Mar 4, 2011 9:53AM

Minister Louis Farrakhan of the Nation of Islam, delivers the Saviour's Day address on February 27, 2011 at the Allstate arena in Rosemont IL. I Keith Hale~Sun-Times

Nation of Islam Minister Louis Farrakhan says Moammar Gadhafi has always been a friend and he won't distance himself from the Libyan dictator.

Speaking Sunday at the annual Saviours' Day convention at the Allstate Arena in Rosemont, Farrakhan didn't discuss specifics about the deadly uprisings in Libya.

But the 77-year-old said no leader has been loved by 100 percent of his people and said that if Gadhafi is persecuted for crimes against humanity, the same should apply to former President George W. Bush for the wars in Iraq and Afghanistan.

Farrakhan visited Gadhafi in the 1980s and in 1996 accepted a humanitarian award from him. But during his speech Sunday he warned the wave of revolution spreading across the Middle East is coming to the United States.

Speaking to followers who all but filled the 18,000-seat venue, he said, "What you are looking at in Tunisia, in Egypt, in Yemen, in Jordan, in Libya, in Bahrain will soon, very soon be in all the nations of the world . . . and even sooner take place in America.

"What you see happening there, you'd better prepare because it will be coming to your door, America."

And Farrakhan added, "I hope that President Obama will remember his instructions to all nations — be careful how you attack and kill innocent people who are protesting. Take your own words into your bosom and be reminded when it comes to your home."

Followers rewarded him with several raucous standing ovations during the four-hour speech.

"Don't leave until I close — that might be a year from now," he joked with listeners at one point.

"Teach on!" his followers urged him.

Farrakhan also said he had spent time at the Church of Scientology's celebrity center in Los Angeles and had been impressed with the church's method of "auditing" — a process he said was comparable to therapy.

He said the church's founder L. Ron Hubbard had a mission to "civilize white people," adding that Hubbard "is so exceedingly valuable to every white person on this earth."

Scientology books were available for sale at the Savior's Day event, but Farrakhan said he was not converting and did not need a new religion.

His speech also covered familiar topics from previous Savior's Day events, including a focus on the common beliefs of Christians and Muslims who he said "should not be at war with one another," how the Nation of Islam believes that white people were created from blacks 4,000 years ago on an Aegean island by a black scientist, and on problems affecting the black community, including street gangs.

He also criticized the sexually charged performances of popstar Rihanna, saying they were "filthy" and that people who enjoyed such antics were "swine," a description he also applied to homosexuals and lesbians. He also criticized immigrant Muslims in the Chicago area for moving to white suburbs and being patronizing toward black Muslims.

During Black History Month, schools should teach from Nation of Islam books that say Jewish people took advantage of blacks, he said. An Anti-Defamation League spokesman said Farrakhan's comments were "just the usual hate speech and propaganda."

He warned that non-believers and the sinful would face the wrath of God through high-technology UFOs or "wheels" that he has often described in previous addresses.

No Danger No Concern No Sanity

Mark Sircus Ac., OMD, Director International Medical Veritas Association

On March 15 Michi Okugawa wrote, "The situation in Tokyo is getting worse. The number of people who are panicking is increasing with more and more people trying to get out of Tokyo or out of the country. The nuclear plant explosion is having a large effect in our daily lives. The biggest problem is transportation. Tokyo is darker now due to power saving. As I am

writing this, more people have decided to evacuate from Tokyo. I am living my usual life but the surrounding is in a panic."

The government of the world's third-biggest economy has been insisting that there is no widespread threat of radiation but confirmed that fresh foodstuffs are now showing signs of contamination.

The double speak has officially started so now we know that the trouble is real, dangerously dark and that we will be treated like cows instead of intelligent human beings. On March 19, 2011 it's been only three short days we have gone to the brink of an unimaginable catastrophe that does not seem so bad if you read the mainstream press. Only light radioactive showers predicted for the weekend over southern California. Nothing to worry about!

The Japanese government said Saturday the 19th radioactive iodine has already turned up in tap water in Tokyo and five other areas. Of course they add in the double speak saying that it's only "small but safe amounts of" of some very dangerous stuff.

Best way of conceptualizing this event: The largest nuclear complex in the world is now in the process of becoming the hottest radioactive emitter in the world with deadly plutonium in the mix. Very soon the showers will turn heavy and no one is going to want to be in the jet streams path. Already they are starting to measure the exposure to the people local to the disaster in terms of how many CAT scans of radiation they are being exposed to as if these medical scans were safe, which they are not.

Nuclear power plants are really dangerous facilities put in practical use on stipulation that they can "completely seal in radiation," while radioactive weapons commit an impermissible crime scattering radioactive materials in the environment.

At the power plant site itself, with almost all the reactors and spent fuel ponds in various stages of meltdown we have a super lethal situation that can only get worse. Representative Michael Burgess, Republican of Texas, asked for detail about the radiation levels at the Japanese nuclear plant. "Are we talking about radiation equivalent to a chest X-ray? A CAT scan?" he asked. Gregory B. Jaczko, the chairman of the Nuclear Regulatory Commission replied, "Levels that would be lethal with a fairly short period of time."

Harold Denton, a former senior official with the U.S. Nuclear Regulatory Commission was faced with the Three Mile Island crisis, holding daily news conferences. Talking about the situation in Japan he said, "This is certainly far worse than Three Mile Island." But the Japanese are not rating it that seriously yet but we each passing day they will see and be forced to admit the more than partial destruction of the northern part of their nation, which in all likelihood include the Tokyo metropolitan area of 30 million people.

There are brave men fighting what could end up being a losing battle against a nuclear Armageddon for Japan and even other large parts of the northern hemisphere. These men will certainly all die so up close they need to be to shoot their water cannon from fire and police trucks.

Some of that lethal stuff is already falling down in "safe" dosages in California and everyone there is being told to not sweat about it -it's perfectly safe. And even

though it can be measured on instruments they want you to believe that your cells will not pick up on the radioactive particles. A diplomat who has access to radiation tracking by the U.N.'s Comprehensive Test Ban Treaty Organization told the Associated Press in Vienna that initial readings show radiation has in fact reached California.

But a little is good for you so really don't worry about a thing. You better believe I am deadly serious that some people will fight for the devil, for the death principle, which is what radiation is. I have seen doctors fight for the right to use deadly mercury in vaccines and most dentists have not completely given up on mercury laden dental amalgam. Almost everyone in medicine and dentistry thinks fluoride is wonderful for the children. Once there were some psychologists who actually went so far as to publish their new philosophy that child sexual abuse really was not such a bad thing after all. No sanity is the watchword here - but yes I agree. Radiation is healthy, going out in the sun, without toxic sunscreen exposes one to healthy radiation that provides the most wonderful biochemical life-giving effects. But we are going to be talking about really nasty radiation coming from Japan and let's see what the dosages and exposures are in the end.

In principle, using the Atomic Energy Control Board's (AECB) regulatory limits, we can calculate that 0.1 micrograms of plutonium can overdose one person while noting that maximum safe exposure limits is placed at 0.56 micrograms maximum full body exposure and 0.25 micrograms for lung exposure. "Experiments with beagle dogs suggest that about 27 millionths of a gram of insoluble plutonium would be sufficient to cause lung cancer in an adult human being with virtual certainty, with significant risks probably associated with far lower doses," report International Physicians for the Prevention of Nuclear War. According to the Canadian Coalition for Nuclear Responsibility (CCNR) 0.1 grams would overdose one million people, one gram, ten million people, 100 grams, one billion people and 600 grams, six billion people.

"A rapid release of one kilogram of plutonium at ground level in dispersible, inhalable form would cause a public health emergency of the first magnitude. Plutonium air concentrations could be on the order of hundreds of micrograms per cubic meter of air at one kilometer

from the release site. Individuals breathing this air would inhale enough plutonium to cause cancer with certainty within minutes," said Dr. Edwin S. Lyman of the Nuclear Control Institute. This is the nightmare of nightmares. There is an incredible amount of plutonium in this plant that could very well put us all in supercritical danger.

*

350 tons of uranium is equal to about a kilogram of plutonium. – Dr. Chris Busby

*

The Pentagon has misled the world with claims that its DU is safe. They have lied about depleted uranium regardless of how many of their own soldiers become ill and die from it and from the toxic vaccines they administer in mega doses before troops are deployed into war theaters. The Pentagon has maintained that DU shells are safe because they contain only mildly radioactive uranium when in reality depleted uranium also contains small amounts of plutonium and other highly radioactive elements. Despite the authorities' attempts at concealment, the truth is out.

Since World War II, accumulated radiation has increased the radiation burden to the global community. Nuclear weapons testing, nuclear power plants, radiation accidents like Three Mile Island and Chernobyl, and terrible nuclear accidents from earlier years in Russia have all contributed to increasing the overall radiation contamination of the global environment. We cannot escape exposure because we breathe the air, drink the water and eat the food from contaminated soils.

When uranium burns into particles, it will enter human bodies ingested with drinking water and food, or inhaled with air. In this case, the whole radiation and chemical toxicity will be released in the body.

Professor Katsuma Yagasaki

According to Dr. Katsuma Yagasaki, "DU dust-like particles can enter human bodies, and once taken into the body, they will become tens of millions times more hazardous. Newly released data indicate that low-level radiation is more likely to cause biochemical abnormalities than intensive high-level radiation. It is wrong to make light of the hazard of low-level radiation."

After the "Shock and Awe" campaign in Iraq in 2003, very fine particles of depleted uranium were captured with larger sand and dust particles in filters in Britain. These particles had traveled in 7-9 days from Iraqi battlefields as far as 2400 miles away. The radiation

measured in the atmosphere quadrupled within a few weeks after the beginning of the 2003 campaign, and at one of the five monitoring locations, the levels required two official alerts to the British Environment Agency.

*

Within nine days of the start of the Iraq war on March 19, 2003, higher levels of uranium were picked up on five sites in Berkshire. – *London Times*

*

The Ministry of Defense refused to acknowledge the possibility of any connection between the use of atomic weaponry in Iraq and these readings in England, saying the uranium was of a "natural origin" and there was no evidence that depleted uranium had reached Britain from Iraq.

According to Dr. Chris Busby and Dr. Saoirse Morgan, who forced the British government to release the above information, "On the basis of the mean increase in uranium in air of about 500nBq/m³ we use respiration data to calculate that each person in the area inhaled some 23 million uranium particles of diameter 0.25 microns. As far as we know, this is the first evidence that uranium aerosols from battle use have been shown to travel so far."

Dr. Chris Busby

The military, essential partners in everything nuclear, have been playing with the nuclear fires on the battlefields and the stuff is getting back home. Typical they would not tell us commoners anything about it. Will they tell us when things get completely out of control in Japan?

The shattering truth of all this leads us to the conclusion that radiation travels with ease on the winds and the jet stream long, very long distances, so it's a big mistake to assume we're out of harm's way. Busby and Morgan made it perfectly clear that "the evidence from the present analysis is implicit in the results; i.e., the increases found clearly demonstrate that the uranium particles are capable of long-distance travel."

Busby and Morgan continue saying, "Despite many pieces of evidence that the uranium aerosols are long-lived in the environment and are able to travel considerable distances, this is the first evidence as far as we know, that they are able to travel thousands of miles. The distance traveled from Baghdad to Reading following the wind patterns implicit in the pressure systems at the time is about 2,500 miles. Although this transport may be hard to believe at first, the regular desert sand events that occur in the UK should teach us that the planet is not such a large place, and that with

regard to certain long-lived atmospheric pollutants, no man is an island."

After traveling 2,500 miles, if the exposure to the English was 23 million uranium particles, it is anyone's guess the amount of fallout that reached the United States. Odds are that everyone in the northern hemisphere was contaminated to one degree or another.

Special Note on Iodine: Dr. Miller says, "Radioisotopes pose an important health risk to man in nuclear accidents associated with electric power generation due to their uptake by the thyroid glands. Topical application of tincture of iodine (I) was found to be effective in blocking the thyroid uptake of orally administered ¹³¹I [¹³¹-Iodine] in humans. Abdominal skin application of tincture of I [iodine] resulted in an approximately 82 percent reduction in the uptake of ¹³¹I by the thyroid gland. The effectiveness varied among individuals and may have depended on the quantity applied and on the application site. In each study group, elevated levels of serum I were observed. This may be an attractive alternative method of mass protection from radioisotopes of I following nuclear accidents. Serum I concentrations peaked at approximately two hours after topical application of tincture of I."

Dr. David Brownstein says, "13mg/day of iodine prevents approximately 96 percent of radioactive iodine

from binding to the thyroid gland. That is the approximate dosage of iodine ingested daily by the Japanese. This is over 100x the average daily dose ingested by Americans. Please keep in mind it is not just the thyroid gland that is at risk with exposure to radioactive iodine. The breasts, ovaries, uterus, prostate, skin, and other organs all bind and require iodine for optimal functioning. In fact, every cell in our body requires iodine for optimal functioning. Therefore, if we are iodine deficient, exposure to radioactive iodine can potentially result in damage to all the cells of the body. My experience has shown over 95 percent of patients are deficient in iodine. I believe iodine deficiency is one of the underlying causes of the epidemic of cancer of the breast, thyroid, ovaries, uterus and prostate. Furthermore, iodine deficiency is the underlying cause of thyroid disorders including Hashimoto's disease, Grave's disease, goiter, and hypothyroidism. Our iodine levels have fallen 50 percent over the last 30 years. During that time, all of the above conditions have been rising at near epidemic rates."

Atomised

Posted on March 16, 2011 by [George](#)

The Fukushima crisis should not spell the end of nuclear power.

By George Monbiot. Published on the Guardian's website, 16th March 2011

The nuclear disaster unfolding in Japan is bad enough; the nuclear disaster unfolding in China could be even worse. "What disaster?", you ask. The decision today by the Chinese government to suspend approval of new atomic power plants. If this suspension were to become permanent, the power those plants would have produced is likely to be replaced by burning coal. While nuclear causes calamities when it goes wrong, coal causes calamities when it goes right, and coal goes right a lot more often than nuclear goes wrong. The only safe coal-fired plant is one which has broken down past the point of repair.

Before I go any further, and I'm misinterpreted for the thousandth time, let me spell out once again what my position is. I have not gone nuclear. But, as long as the following four conditions are met, I will no longer oppose atomic energy.

1. Its total emissions – from mine to dump – are taken into account, and demonstrate that it is a genuinely low-carbon option.
2. We know exactly how and where the waste is to be buried.
3. We know how much this will cost and who will pay.
4. There is a legal guarantee that no civil nuclear materials will be diverted for military purposes.

To these I'll belatedly add a fifth, which should have been there all along: no plants should be built in fault zones, on tsunami-prone coasts, on eroding seashores or those likely to be inundated before the plant has been decommissioned or any other places which are geologically unsafe. This should have been so obvious that it didn't need spelling out. But we

discover, yet again, that the blindingly obvious is no guarantee that a policy won't be adopted.

I despise and fear the nuclear industry as much as any other green: all experience hath shown that, in most countries, the companies running it are a corner-cutting bunch of scumbags, whose business originated as a by-product of nuclear weapons manufacture. But, sound as the roots of the anti-nuclear movement are, we cannot allow historical sentiment to shield us from the bigger picture. Even when nuclear power plants go horribly wrong, they do less damage to the planet and its people than coal-burning stations operating normally.

Coal, the most carbon-dense of fossil fuels, is the primary driver of manmade climate change. If its combustion is not curtailed, it could kill millions of times more people than nuclear power plants have done so far. Yes, I really do mean millions. The Chernobyl meltdown was hideous and traumatic. The official death toll so far appears to be 43: 28 workers in the initial few months and 15 civilians by 2005. Totally unacceptable, of course; but a tiny fraction of the deaths for which climate change – through its damage to the food supply, its contribution to the spread of infectious diseases and its degradation of the quality of life for many of the world's poorest people – is likely to be responsible.

Coal also causes plenty of other environmental damage, far worse than the side-effects of nuclear power production: from mountaintop removal to acid rain and heavy metal pollution. An article in Scientific American points out that the fly ash produced by a coal-burning power plant

"carries into the surrounding environment 100 times more radiation than a nuclear power plant producing the same amount of energy."

Of course it's not a straight fight between coal and nuclear. There are plenty of other ways of producing electricity, and I continue to place appropriate renewables above nuclear power in my list of priorities. We must also make all possible efforts to reduce consumption. But we'll still need to generate electricity, and not all renewable sources are appropriate everywhere. While producing solar power makes perfect sense in North Africa, in the UK, by comparison to both wind and nuclear, it's a waste of money and resources. Abandoning

nuclear power as an option narrows our choices just when we need to be thinking as broadly as possible.

Several writers for the Guardian have made what I believe is an unjustifiable leap. A disaster has occurred in a plant that was appallingly sited in an earthquake zone; therefore, they argue, all nuclear power programmes should be abandoned everywhere. It looks to me as if they are jumping on this disaster as support for a pre-existing position they hold for other reasons. Were we to follow their advice, we would rule out a low-carbon source of energy, which could help us tackle the gravest threat the world now faces. That does neither the people nor the places of the world any favours.

ERIC MAY:

Big Oil + Barack Obama = False Flag

By Captain Eric H. May for Veterans Today, March 8, 2011
Purblind Prescience

Eight years ago I accepted the 9/11 myth without reservation, and tried to reactivate my commission to join what I then believed was a just war against Iraq. Like most patriotic veterans, I was blinded by love for my country, which I had served in the 70s, 80s and 90s as a member of the Army, Army Reserve and National Guard.

Ron Paul's Congressional District 14 is ground zero for a Houston Ship Channel false flag attack.

I wasn't blind to the vulnerability of my home town, Houston, though. On 6/22/1997 I had been blown out of bed by a huge explosion at Shell Chemical in nearby Deer Park. On 9/11/2001 I had been teaching high school a mile away from the Houston Ship Channel, pathway of the city's petrochemical industry.

Add to these experiences my noncom background in the Chemical Corps and I was well-qualified to write a terror target analysis of the Bayou City for my editorial buddies at the Houston Chronicle.

"Don't laugh at duct tape; it saves lives"-
<http://www.ghosttroop.net/ducttape.htm> is one of my favorite essays, since it offers all the right answers for all the wrong reasons:

"When I was a general staff officer we routinely envisioned worst-case scenarios to test our preparedness. Let's use one for ourselves: Early one morning there is a massive explosion in the chemical district along our ship channel. ... Lethal gases, similar to the ones released in the catastrophe of Bhopal, India, erupt into the atmosphere. An early morning inversion temperature gradient - our climatic norm - keeps the toxic cloud on the ground, while gentle southeasterly breezes - again, our norm - blow it northwest inside Loop 610, where our population is most dense." — 2/23/2003

Contemporary Confirmation

Eight years to the day after my Chronicle op-ed, its scenario received unsettling support, as described in "[Citgo fined for 2009 Corpus Christi blast, fire](#)"

"Citgo Petroleum Corp was fined \$303,294 for a July 2009 explosion and fire at its 163,000 barrel per day (bpd) Corpus Christi, Texas, refinery that injured one worker and nearly spread toxic hydrogen fluoride over Corpus Christi." — 2/23/2011

Worse still was a story the next day by Public Integrity and ABC, "[Use of Toxic Acid Puts Millions at Risk](#)"

It shouted a Doomsday warning to BP, Texas City, on the Houston Ship Channel:

"Some worst-case scenarios described in company filings with the U.S. Environmental Protection Agency are particularly chilling: An HF (hydrogen fluoride) release from the BP refinery in Texas City, for example, could total 800,000 pounds, travel 25 miles and put 550,000 people at risk of serious injury, according to BP's own calculations, provided to the EPA." — 2/24/2011

That same day a disaster accentuated the danger that causes residents to nickname their town TOXIC CITY.

"'Worst case' in Texas City gas leak is tens of thousands of gallons" :

"Work crews continued their efforts to recover gasoline that spilled from a ruptured pipeline in Texas City early Thursday, forcing the evacuation of about 15 homes and the closure of Texas 146." — 2/24/2011

The next day Veterans Today published my article about BP's false flag collaboration with neighboring NASA on 7/28/2005. "[The False Flag Space Shuttle](#)" quickly went worldwide, with over 10,000 postings from Europe to the Mideast to China:

"At dusk began the most awesome spectacle imaginable: An expanding cloud of energy rose up like some nuclear phoenix, growing to a height of 45 miles, and a width of more than 100 miles. These measurements are not guesses: In my first Army enlistment, I was trained by the Chemical Corps to compile and evaluate such data. The article title is not hyped: "BP 7/28 Nuke Plan vs. U.S. Officers Coup" — 2/25/2011

Greed Goes Green

With all the negative news one might suppose that Big Oil, BP in particular, would be ducking and covering to

avoid the wraith of the feds. In the surreality of the nation's petrochemical industry, though, bad news is good news, and cause for celebration. A handful of headlines will prove my point:

- 2/23/2011 — "[Oil prices reach \\$100 per barrel](#)" .
- 3/1/2011 — "[BP fund lawyer to refuse 100,000 Gulf spill disaster claims](#)".
- 3/1/2011 — "[Oil Drilling to Resume in the Gulf's Deep Waters](#)" .
- 3/3/2011 — "[BP executives awarded bonuses despite Deepwater Horizon disaster](#)" .
- 3/4/11 — "[BP Atlantis platform cleared on safety issue](#)"
- 3/6/2011 — "[Oil Platform Fire In The Gulf of Mexico](#)"
- 3/6/2011 — "[Gas up 33 cents — second biggest two-week jump ever](#)"

Perceptive Publisher

In the bizarre post-9/11 world, bad is good and worst is best. Consequently we shouldn't be surprised that, at a time when the mainstream media declares us to be

heading for a chemical catastrophe, Big Oil is celebrating. Nor should we be surprised if oil industry incidents are really arsons, not accidents. It's what Naomi Klein described as "disaster capitalism", and it goes back as far as Nero's burning of Rome.

Leave it to my boss at The Lone Star Iconoclast, renowned Texas publisher W. Leon Smith, to explain the energy equation in a three-year-old editorial that could — and should — be published today. "Time to Investigate Houston Is Now":

<http://tinyurl.com/ykt47q5>:

"Every time there is a disaster or 'mistake' involving the petrochemical industry, gasoline prices shoot up. And, daily, the federal government assures the American public that gasoline prices are going to continue to rise. In fact, recent official predictions suggest \$4-a-gallon gasoline this summer. Thus lies the basis for governmental predictions of continued disasters and, ultimately, of an impending new 9/11. They say it's not if, but when." — 3/3/2008

Endnotes:

Please refer to the [America First Books](#) index for more of my articles and interviews on this topic:

I apologize to my readers for being dense (with links) in this analysis, but the topic demands details. I quoted from each crucial article, hoping thereby to entice those who have time to read more, and suffice those who don't.

Amelia Aremia: Holocaust Denial, 17 March 2011

How does the questioning or even the denial of a Holocaust become a racial vilification and therefore, illegal? What does any country have to do with Israel's problems, except that they have made them the world's responsibility? There are many Jewish organizations and committees who constantly monitor the little come-backs to the Media, a Media that promotes Zionists writers and speakers, while giving a blackout or censorship to any opposition or question that a Holocaust existed in the Second World War. And if it did, what restitution has been given to the more than 50 millions of others who also perished under the same circumstances. The gradual awakening of more people must gain speed if the world is to counter Jewish influence that has created worldwide division and unrest; and not to forget the injustice given out by the courts.

For years those who have researched the world conspiracy that is led mostly by the money and brains of the Zionist movement — have exposed their goals and the injustices done to the Arab people in the Middle East, and in the Western Nations. Long before Senator Fulbright of Arkansas, brought out their conspiracy and

control over the U.S. Congress, many were well aware that the Zionists controlled our national government since the Wilson administration.

To reject the conspiratorial thesis of history is to reduce the blaming of everything on "bungling," "mistakes," "stupidity," "idealism," and so forth. While all of these factors may be involved on both sides of the question, the element of conspiratorial planning is also necessary for the full explanation. One must face the truth: the leaders of Israel and the leaders of Russia (formerly the Soviet Union) are not enemies, but secret allies. Lest an unwary reader falls into the trap of using the cliché of "anti-Semitism" against this, let me state most emphatically that the world conspiracy and Zionism are not all Jewish conspiracies...Rather, they are led by that small clique of elitists, who are among the richest on earth, some call themselves "Jews" but in reality are Khazars, with not a drop of Semitic blood in their veins. And some refer to themselves as "Zionists."

There is much the Arab nations in the Middle East, plus those in the Westernized World, can do through cooperation to thwart this sinister world force called Zionism...What is most tragic is that the Arab leaders

themselves, do not realize to the fullest extent, that the Zionists are only part of a far more dangerous and powerful clique of "Insiders" who seek to rule the world. Iran has been the only country to understand. Most Arab leaders fail to understand that the United Nations, the US administrations since Woodrow Wilson, the UK, Russia, and Israel are all dominated by the same Insiders who use wars and Communism as weapons to enslave mankind. Communism is not dead, but hidden behind a new face.... Zionism.

Many Arab leaders accept "aid" from Russia, not understanding that this slave camp is one of the creators of Israel and is a sworn enemy of Islam and

Christianity. Neither do they seem to understand that American presidents, who neither seem to understand, that they have been slavish puppets of the masters for whom they work.

To awaken the American people and most of the world is to force a change in the United States Foreign Policy by educating them to the truths. If the Arab leaders, along with Iran and Lebanon, would invest only a fraction of one percent of their oil revenues to secure a small part of the news media and publishing business, miracles could be accomplished that could change the course of history.

Töben resisting

German-hater Jeremy Jones out for his pound of flesh!

At long last this expert legal persecutor and Holocaust-believing Jew has obtained a Court Order against Töben for costs of \$56,435.72. He never had to prove anything in court except that Töben's writings hurt his feelings. He never had to prove his claim that Germans systematically exterminated Jews in homicidal gas chambers.

Töben has a small house in country Victoria worth about \$65,000. But he also has debts, and through a solicitor Töben offered Jones \$32,000, but that was not enough and bankruptcy proceedings are now in place. So, Töben needs about \$25,000 to save his home in the bush where he does a lot of his physical and mental work.

Here are a few pictures of Töben working around his home, also dressed in his Auschwitz pyjamas.

- Arbeit macht Frei -

Töben disposing of what evidence?

- any witness about?

Is this a shed with a wooden or metal gas-tight door leading into a gas chamber?

A brief rest on the steps before entering the home...

Monday, 22 February 1999, the day on which the Wimmera Community was informed of Töben's trip to Germany, which also for the first time in his life landed Töben in gaol.

...and more memorabilia of a life-long battle for truth, honour & justice for those physically oppressed and mentally enslaved, in particular by the Holocaust-Shoah narrative of lies and deception.

...and then Töben relaxes and wonders what will happen next!
